Payment Security and Fraud Prevention

SecureCheck-Pro

SecureCheck-Pro 8 delivers next-generation functionality for check and form issuance that enhances both the security and productivity of your organization's disbursement process.

ABC Optimal Efficiencies for Check Issuance

SecureCheck-Pro 8 offers features designed to create significant time-and-cost savings for your check and form production.

You can print checks for any number of accounts to blank stock, eliminating the requirement to purchase and secure pre-printed stock. Print payroll and accounts payable checks to the same blank stock, and automatically apply signatures during the printing process based on check amount. The system automates check approval processing and notifications, as well as other manual tasks such as check-run sorting and image archiving.

In addition to checks, print all your internal forms with SecureCheck-Pro 8 - W-2s, 1099s, and more. Making

Secure Check and Form Issuance Solution

changes to your check or form information is easily and quickly managed from within SecureCheck's admin module.

Unsurpassed Process Control

In addition to enhancing the efficiency of your payables process, SecureCheck-Pro 8 is also designed to prevent fraud at every stage of check issuance.

State-of-the-art security features, including batch approval workflow, event notifications, audit trails, event logs, and optional positive pay automation, add critical internal controls to your process.

All checks produced with SecureCheck are printed to blank stock, which is devoid of all check printing information except the stock's embedded security features. With SecureCheck-Pro 8 you also have the option to add printed-check security features, such as security fonts and watermarks, to create an unmatched level of protection from check alteration and duplication.

"SecureCheck has improved our check printing because it is without a doubt a faster, simpler process. Everything is done in one step. The security features in SecureCheck make it much harder for anyone to falsify a check, especially combined with the high-security check stock."

Innovative Payment Solutions

Your accounting application data is merged with the correct check outline to create fnished checks on blank security check stock.

Centralized System Administration

The *Admin Module* provides an interface for all system administrative functions.

Intuitive, User-Driven Interface

Intuitive interface design provides ease-ofuse for all printing and system administration tasks.

Multiple Checking Accounts

Create and easily modify form-graphic overlays for any number of checking accounts, with 10 text objects and 6 graphic objects available per form.

Check Set-up Viewer

Viewer provides WYSIWYG capabilities to view check data locations and create a realtime audit map.

Signature Logic

Define how many signatures (one, two or no signatures) are printed on each check based on check amount. Each checking account can have its own logic pattern.

@ Automatic Account & Printer Selection

Print mixed-account check runs with automated selection of the correct check-overlay and printer.

Sorting

Sort based on check number, payee, date, amount, filename, overlay, or batch number from the approval queue.

■ Secure ImageTM Check Imaging

Automatically create and store a copy of each printed check in .pdf format. Eliminate the need to print and file paper copies.

Manual Checks

Securely print manual checks from your accounting package. Automate data entry for previously entered names and addresses using the payee address book.

No More Pre-Printed Forms

Create all your internal forms with SecureCheck. Save up to 70% on form production, and also eliminate secure storage requirements for pre-printed forms.

Print Process Security

SecureCheck enhances your check printing security with features that add both convenience and internal controls to your process:

Batch Approval Workflow

Replace error-prone, vulnerable manual processes with reliable, secure approval workflow automation. Approvers are notified and log in to approve/deny batches or individual checks from an approval queue.

e Event Notifications

Keep specified recipients informed of important check printing activity. Notifications can include any of the following:

• Notice that check printing has occurred (For Windows users, this notice also includes one of two audits: detailed or summary. Windows users can also receive notice of checks over a specified amount.)

- Notice of excessive failed logins
- Notice regarding overlay changes

Audit Trail

Capture up to 11 auditable fields (payee, amount, check date, check number, account, zip, +5 additional audit fields of your choice).

Security Watermark

Print a security watermark across the face of your checks. The watermark contains the payee name and amount, with customizable settings for line spacing, pitch, and grayscale.

Security Fonts

New

For greater security, print the check amount in *Reverse Font* or *Micro Font* in a second location on your checks.

Security Permissions

Enable users with access permissions suited to their exact role and responsibilities. **Double-Login** requirements are also assignable, where an administrator must log in with a user before access is granted.

Optional Features

High-Volume Print Optimizer

The **High-Volume Print Optimizer** enables high-speed print performance via the power of *APSecure Print Engine Intelligence*. Advanced printing capabilities allow high-speed print processing and printer load balancing to optimize efficiency for large-volume check runs.

Nev

Integrated Positive Pay

Automate the creation and delivery of positive pay files. Start protecting every check your organization issues with positive pay fraud prevention.

System Specifications

Host PC

1 GHz or higher processor clock speed recommended

Operating System:

Windows XP / XP Pro / Vista (w/ Service Pack 2) / 7 / 8 and Windows Server 2003 / 2008

1 G of RAM or higher

Minimum Disk Space: 100 MB + at least 10% free hard drive space after the install.

Monitor: Super VGA (1024x768) or higher-resolution video adapter and monitor

Enhanced

Database: MS SQL Server 2008/2012 - If you already own a license, Se-

cureCheck will use it; otherwise, the Express Edition of SQL Server 2008 / 2012 will be deployed.

Client PC

Operating System:

Windows XP / XP Pro / Vista (w/Service Pack 2) / 7 / 8 and Server 2003 / 2008

Print Stream

Generic Text - ASCII, Windows driver printing (.emf), and SecureCheck Data Format (.csv)

Printer Compatibility

Software-Only Configuration: PCL 5e-compatible laser printers, including Hewlett Packard, Lexmark, Canon, and many more.

Software-Firmware Configuration: Contact AP Technology for an HP LaserJet compatible printer list.
